

# Easy Portfolio

Created by Emanuel Felipe.

Thank you for purchasing my file. If you have any questions that are beyond the scope of this help file or need some customizations for your site, please feel free to email me. Thanks so much!

Contact Info: [themeforest@emanuelfelipe.net](mailto:themeforest@emanuelfelipe.net) (contact me for support or customizations).

## Table of Contents

1. HTML Structure
  2. CSS Files
  3. Javascript
  4. PSD Files
- 

### 1. HTML Structure

Remember to edit:

- page title (line 5)
- your portfolio name (line 26. Also logo.jpg in "images" folder, use the logo.psd template provided with the package)
- your contact information (lines 29 and 30)

This theme is a fixed layout. All of the information within the main content area is nested within a div with an id of "works".

If you would like to edit the color, font, or style of any elements in one of these columns, you would do the following:

```
#works a {  
    color: #someColor;  
}
```

To ensure that your new styles are applied, make sure that there isn't a style lower in the CSS file that is being applied after yours.

---

## 2. CSS Files

I'm using two CSS files in this theme:

- reset.css (better to not touch this file)
- styles.css

The first one is a generic reset file. Many browser interpret the default behavior of html elements differently. By using a general reset CSS file, we can work round this. This file also contains some general styling, such as anchor tag colors, font-sizes, etc. Keep in mind, that these values might be overridden somewhere else in the file.

The second file contains all of the specific styling for the page.

If you would like to edit a specific section of the site, simply find the appropriate label in the CSS file, and then scroll down until you find the appropriate style that needs to be edited.

---

## 3. Javascript

This theme imports three Javascript files.

- jQuery, a Javascript library that reduces the amount of code you must write.
- flow plugin for the main content effect

I included a plugin to create the effects. The plugin is packed, so you won't need to manually edit anything in the file.

The custom script inside the html file calls the animation, the only necessary thing to know is how to call the effect. For example:

```
$("#menu").jFlow({  
    slides: "#works",  
    //if you got any problems with the content height, adjust  
the size below  
    height: "590px",  
    duration: 300  
});
```

You can edit the height and the duration values if you want so.

---

## **4. PSD Files**

I've included this PSD file in this theme:

- The logo image in header

If you'd like to change the logo image in the header, open "logo.psd", make the necessary adjustments, and then save the file as "logo.jpg" in the "images" folder.

---

Once again, thank you so much for purchasing this theme. As I said at the beginning, I'd be glad to help you if you have any questions relating to this theme. No guarantees, but I'll do my best to assist. If you have a more general question relating to the themes on ThemeForest, you might consider visiting the forums and asking your question in the "Item Discussion" section.

Best regards  
Emanuel Felipe
